	> 20 mg/l (calculated 1 hr exposure) non-poisonous, DOT. ¹	STEL:	None established
Eye Irritation:	Not an irritant.	Ceiling:	None established
Skin Sensitization:	Not a sensitizer.	XEL ² :	2.5 mg/m ³ (Total Dust)
Skin Irritation:	Not an irritant.		0.4 mg/m ³ (Respirable Dust)
Human Patch:	Non-irritating, non-sensitizing		
Mutagenicity:	No mutagenicity detected in Ames, Micronucleus, and WP ₂ Assays.		
Carcinogens:	None present		
Aquatic LC ₅₀ :	> 500 mg/l (Fathead Minnows) non-toxic.		

Additional Information: The information noted above is toxicity data for toner. In a Xerox sponsored chronic inhalation study in rats using a special test toner, there were no lung changes at all in the lowest exposure level (1 mg/m³), the most relevant level to potential human exposures. A very slight degree of fibrosis was noted in 25 % of the animals at the middle exposure level (4 mg/m³) while a slight degree of fibrosis was observed at the highest exposure level (16 mg/m³) in all animals. These findings are attributed to "lung overloading," a generic response to excessive amounts of any dust retained in the lungs for a prolonged interval. The special test toner was ten times more respirable than commercially available Xerox toner to comply with EPA testing protocol and would not function properly in Xerox equipment.
