

FIRE BLANKETS: Essential Fire Safety for Home, Office & Industry

**HELP KEEP YOUR FAMILY,
BUSINESS, AND YOUR
EMPLOYEES, SAFE.**

🔥 Stop Fires Fast. Stay Safe.

Fire Blankets are great for both
Residential and Commercial use.

Residential: Kitchens & small fires
Commercial: Breakrooms &
kitchenettes

WHAT IS A FIRE BLANKET?

A fire blanket is a fire safety device made of fire-resistant material designed to extinguish small fires. It works by smothering the fire, cutting off the oxygen supply.

WHEN TO USE A FIRE BLANKET:

- When a small fire has just started
- When someone's clothing catches fire
- As a shield while evacuating through flames

DO NOT USE:

- On large, out-of-control fires
- Instead of calling emergency services

HOW TO USE A FIRE BLANKET:

- Pull the tabs to release the blanket from its container.
- Hold the blanket in front of you as a shield (wrap hands in edges to protect from burns).
- Gently place (do NOT throw) the blanket over the fire to completely cover it.
- Turn off the heat source if safe to do so.
- Leave the blanket in place until the area is cool.
- Call emergency services if the fire is not fully out or you're unsure.
