

CyMetric Compliance Dashboard

CyMetric produces a drill-down dashboard with the completion of compliance program assessments. The dashboard allows stakeholders to view a high-level representation of the maturity level of their program as well as understand where risks reside.

CyMetric enables users to drill into deeper levels of the regulatory or framework requirements to see how the program is performing within functional areas.

99 Garnsey Rd, Pittsford, NY 14534

cymetric

Depending upon the regulation or framework, CyMetric allows for drilling down multiple levels to understand in detail where the program is performing well and where there are weaknesses and risk residing in program implementation. Scores are based upon the maturity rating assigned to the controls that comprise the respective categories recorded in the assessment process.

The graphical representation is supported by a detailed Plan of Action and Milestone (POAM) report that captures all of the data recorded during the assessment process including any findings that need remediation.
