

Investing in proper safety surfacing continues to be the primary decision that helps prevent significant injuries on the playground. At Northwest Playground we are your resource for exploring, planning, and making a decision on the right safety surfacing for your playground project.

PLAYGROUND GRASS

POUR-IN-PLACE

SAFETY TILE

ENGINEERED WOOD FIBER

Unitary

Unitary surfacing represents any surface that is bonded together. These surfaces offer 24/7 protection from falls and when installed appropriately also provide for complete ADA accessibility.

SAFETY SURFACING OPTIONS

Loose Fill

Loose fill surfacing defines any safety that is made up of loose granules that cover an area to a specified depth to provide impact attenuation. These surfaces tend to be most cost effective but also require the most maintenance.
